

LAYER

Mix, match, rebuild and repeat. Layer is Isomi's most flexible modular desk system to date.

Designed for longevity, replaceability, and material variety, the Layer system prioritises adaptability and flexibility with endless configurations. Its modular design allows for the easy replacement of panels, enabling users to update the desk's aesthetics with new materials. This eliminates the need to purchase a completely new desk for a refresh.

Product Design Consultant **Gensler**.

ENDLESS CONFIGURATIONS

Layer is suited to any number of settings from office to retail and hospitality to healthcare.

Endless configurations allow seamless integration into various design schemes. Maximize space in compact offices with clever configurations, or design expansive workstations for larger spaces.

Clean-lined and graphical in expression, Layer is structurally honest with modular divisions clearly expressed in its design.

MIX & MATCH SYSTEM

Layer Desk extends beyond its configurations. Its modules can be clad in a mix-and-match material palette, allowing for a spectrum of tactile and visual expressions to suit any interior style.

Choose from a variety of materials, including wood finishes for a natural aesthetic, tiles for a more imposing presence, and metals for a luxurious or industrial look. Classic solid surfaces come in a variety of colours, while sustainable fabrics provide an environmentally conscious choice.

ENVIRONMENTAL IMPACT

Layer's combination of practical and aesthetic versatility make it a key step in Isomi's ambitions to develop and implement more sustainable methods of design and production, as well as further the company's ongoing exploration of the aesthetics and tactility of different materials.

This eliminates the need to purchase a completely new desk for a refresh.

The clip-on panel system and wide range of configurations reduces furniture waste compared to traditional desks that require complete replacement for updates. This reduces the environmental impact associated with production, transportation, and disposal of unwanted furniture.
